Biochim. Biophys. Acta 1216:299-303(1993).

-!- FUNCTION: HGF is a potent mitogen for mature parenchymal hepatocyte cells, seems to be an hepatotrophic factor, are growth factor for a broad spectrum of tissues and cell ty has no detectable protesse activity.

-!- SUBUNIT: Dimer of an alpha chain and a beta chain linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=94363381; PubMed=8081873;

Its mRNA during liver regeneration following hepatic injury.";

L Eur. J. Biochem. 193:375-381(1990).

C -!- FUNCTION: HGF is a potent mitogen for mature parenchymal hepatocyte cells, seems to be an hepatotrophic factor, and a growth factor for a broad spectrum of tissues and cell types of the seems no detectable protease activity.

C -!- SUBUNIT: Dimer of an alpha chain and a beta chain linked by disulfade bond.

C -!- SIMILARITY: Belongs to the peptidase S1 family. Plasminogen
                                                                                                                                                                                                                                                                                                                                                                                            HGF_RAT STANDARD; PRT; 728 AA. The present invention provides a therapeutic agent NK4 polypeptides and their encoding polynucleotides. The invention is useful for producing a medicament for preventing or treating diseases caused by neovascularisation such as ovarian cancer, pancreatic cancer, stomach cancer, gallbladder cancer, renal cancer, prostatic cancer, breast cancer, gallbladder cancer, hepatic cancer, oral cavity cancer, colon cancer, colorectal cancer, hepatic cancer, oral cavity cancer. The invention i also useful in gene therapy. The present sequence is human NK4 protein.
